

Chief Clinical Neurophysiology Scientist

- **Incredible, newly created leadership opportunity!**
- **Lead the team across the spectrum of Paediatric Neurophysiology services.**

Don't miss this chance to call Perth your home. Come and work with us at CAHS in Western Australia visit <https://bit.ly/CAHSbelong> to find out more. Not only do we offer a world class healthcare facility that welcomes the diversity and experience of international health care professionals, Perth offers a fantastic lifestyle in one of the sunniest cities in the world.

About our Directorate:

Our specialised clinic as part of the Children's Neuroscience Service at *Perth Children's Hospital* (PCH) caters to children from preterm to 18 years of age, particularly those with epilepsy, offering a comprehensive range of services from EEGs to Intraoperative Monitoring during brain and spinal surgeries. Our EEG satellite service to *King Edward Memorial Hospital* (KEMH) provides Neonatal EEGs for infants in intensive care.

As a leader in paediatric healthcare, we are committed to healthier futures for our young patients. We are proud to contribute several peer-reviewed publications annually as an outcome of our active involvement in clinical trials and research studies, and in collaboration with our esteemed partners at Telethon Kids Research Institute and universities.

Position Profile and Role:

The Chief Clinical Neurophysiology Scientist role is an incredible leadership position. In this newly created role, you will join our multidisciplinary approach to healthcare, and lead a team of professionals in helping our young patients receive the best care possible.

As the Chief Clinical Neurophysiologist Scientist your key responsibilities include:

- Manage the administrative, scientific and research activities of the Western Australia state-wide service Paediatric Neurophysiology Department.
- Providing representation at meetings/committees and contributing to the activities of professional Societies relevant to Neurophysiology at national and international levels.
- Drive development of educational and skill transfer activities for Hospital and Health department staff and external organisations.
- Manage and mentor the Neurophysiology Scientist team.
