

NCT IS SEEKING FULL-TIME ADULT NEUROLOGIST TO START IMMEDIATELY

General Overview

NCT is a community-based, comprehensive neurology practice with an excellent reputation in the Toronto and throughout Ontario. NCT was founded in 2016 and currently comprises a group of talented general and specialized adult and pediatric neurologists, an allied health team and neurology-related health care practitioners all under one roof.

The Team

NCT has 5 in-house neurologists and several virtual neurologists, 8 allied health staff (PT, OT, Psychotherapy & Nutrition), nurses, physician assistants and a student-led research team.

We have a strong virtual program consisting of a team-based, innovative, rapid-access assessment model. These clinics offer focused evaluations in epilepsy, concussion, headache, tics & Tourette disorder, medical cannabis for neurologic disorders and more.

Our providers specialize in the areas of epilepsy, brain injury, concussion, neurorehabilitation, headache/migraine, and medical cannabis. The clinic is constantly growing and expanding with plans to develop specialized expertise in functional neurological disorders, movement disorders, neuromuscular disease, demyelinating disease and stroke.

NCT has a strong research program as well with a focus on virtual care and medical cannabis. The program has recently expanded to include psychedelics and the utilization of psychedelics in neurology as the field evolves.

NCT is affiliated with many hospitals in Toronto, the GTA and throughout Ontario

The clinic is an OHIP-insured, public clinic that is owned and operated by Numinus Inc. (<https://numinus.com>)

The Role

NCT will be expanding its clinic space and service offerings in 2022 and is immediately seeking a full-time general, adult neurologist.

Expertise in any of movement disorders, functional neurologic disorders, demyelinating disease or stroke are also needed with an opportunity to practice 50% of the time in these areas. An opportunity to develop this expertise into specialized programs at NCT is available and desired.

Other specialized areas include psychedelic neurology and medical cannabis for neurologic disorders. NCT welcomes experience in these areas. Individuals with interest in these areas will be preferred, but it is not mandatory nor required to apply. The clinic offers significant learning opportunities in these fields and is hopeful any interested candidate would want to develop insight into how both psychedelics and cannabis integrate into the practice of neurology.

Why Choose NCT:

The Vision & the Future

NCT is a forward-thinking and progressive multidisciplinary practice that offers full administrative, educational, and clinical support to its practitioners. The practice prides itself on developing every individual's skill to create a highly specialized and cohesive group.

Providing a wide array of services all under one roof has been NCT's goal since its inception. This provides convenience and quality of care for patients and reassures our practitioners that they can practice efficiently and effectively. This structure also promotes a team-based care model facilitating ongoing learning within an enjoyable and social day-to-day work environment.

Two significant initiatives have developed at NCT which makes the available position exciting. In September 2021, NCT was the second clinic acquired by Numinus, a psychedelics company focused on research, drug development and clinical service offerings. This has led to plans for expansion poised to be put in place for fall 2022. This will include in-house EEG, EMG, a blood lab, and a complete neuro-rehabilitation gym with a fully operational 5 bed physiotherapy clinic. This expansion will come with enhanced opportunities for teaching, learning and cutting-edge research.

The vision is to develop the field of Psychedelic Neurology and Psychedelic-Assisted Neurorehabilitation as a specialized clinical service offering at NCT. We plan on being the leaders in psychedelics in Canada within the field of neurology.

Participating in the development of Psychedelic Neurology at NCT is not mandatory for the applicant as any good program requires even greater strength in its foundational care. Therefore, the immediate focus for the available position will be in strengthening and developing expertise in general and specialty neurology.

Compensation

Compensation is a competitive fee-split model with full support, state-of-the-art EMR and administrative service. Billing is fee-for-service. Further details discussed during the interview process.

Location

- 100-491 Eglinton Avenue West in Forest Hill
- Ground floor of the Forest Hill Medical and Professional Building

Qualifications

- Fellow of the Royal College of Physicians of Canada (FRCPC)
- Doctorate in Medicine
- Coverage with the Canadian Medical Protective Association is mandatory
